

Human SHCBP1L siRNA

Catalogue No.:abx933284

siRNA to inhibit SHCBP1L expression using RNA interference.

This product is provided as three 5 nmol vials (15 nmol) or 2x three 5 nmol vials (30 nmol) of lyophilized siRNA oligo duplexes. Each vial contains slightly different sequences to ensure full knockout of the gene. The duplexes can be transfected individually or pooled together to achieve knockdown of the target gene, which is most commonly assessed by qPCR or western blot.

Target:	SHCBP1L				
Reactivity:	Human				
Tested Applications:	RNAi				
Host:	Synthetic		C	6	
B

Form:	Lyophilized	t			
Purity:	> 97%				
Quality Control:	Oligonucleotide synthesis is monitored base by base through trityl analysis to ensure appropriate coupling efficiency. The oligo is subsequently purified by affinity-solid phase extraction. The				
	annealed F	RNA duplex is furt	her analyzed by mass spe	ectrometry to verify th	e exact composition of
	the duplex to-lot cons		ared to the previous lot by	y mass spectrometry	to ensure maximum lot-
Storage:	Shipped at	4 °C. Store at -20) °C for up to one year.		
UniProt Primary AC:	Q9BZQ2 (<u>UniProt</u> , <u>ExPASy</u>)				
Gene Symbol:	SHCBP1L				

Datasheet Version: 2.0.0

Revision date: 25 Mar 2025

GenelD:	<u>81626</u>
NCBI Accession:	NM_001345928.1
KEGG:	hsa:81626
Specificity:	SHCBP1L siRNA (Human) is a target-specific 19-23 nt siRNA oligo duplexes designed to knock down gene expression.
Note:	This product is for research use only.
Directions for use:	 1. Before resuspending, briefly centrifuge the tube to ensure the lyophilized siRNA is at the bottom of the tube. 2. Resuspend the siRNA oligos to an appropriate concentration with DEPC water (e.g. resuspend one vial of 5 mmol siRNA oligo in 250 μl of DEPC water for a final concentration of 20 μM). 3. Transfect with 10 nM - 100 nM siRNA 48 to 72 hours prior to cell lysis.
