

Human ADAM Metallopeptidase Domain 12 (ADAM12) CLIA Kit

Catalogue No.: abx495845

Human ADAM12 Chemiluminescent Immunoassay (CLIA) Kit is a Sandwich Chemiluminescent Immunoassay (CLIA) Kit for use with Serum, plasma, tissue homogenates and other biological fluids.

Target:	ADAM Metallopeptidase Domain 12 (ADAM12)
Reactivity:	Human
Tested Applications:	CLIA
Recommended dilutions:	Optimal dilutions/concentrations should be determined by the end user.
Storage:	Shipped at 4 °C. Upon receipt, store the kit according to the storage instruction in the kit's manual.
Validity:	The validity for this kit is at least 6 months. Up to 12 months validity can be provided on request.
Stability:	The stability of the kit is determined by the rate of activity loss. The loss rate is less than 5% within the expiration date under appropriate storage conditions. To minimize performance fluctuations, operation procedures and lab conditions should be strictly controlled. It is also strongly suggested that the whole assay is performed by the same user throughout.
UniProt Primary AC:	O43184 (UniProt , ExPASy)
Gene Symbol:	ADAM12
GeneID:	8038
OMIM:	602714
HGNC:	190
KEGG:	hsa:8038
Ensembl:	ENSG00000148848
String:	9606.ENSP00000357668
Test Range:	0.156 ng/ml - 10 ng/ml
Sensitivity:	< 0.057 ng/ml

Datasheet

Version: 2.0.0
Revision date: 18 Oct 2024

Standard Form:	Lyophilized
Detection Method:	Chemiluminescent
Assay Type:	Sandwich
Assay Data:	Quantitative
Sample Type:	Serum, plasma, tissue homogenates and other biological fluids.

Note: This product is for research use only.
The range and sensitivity is subject to change. Please contact us for the latest product information.
For accurate results, sample concentrations must be diluted to mid-range of the kit. If you require a specific range, please contact us in advance or write your request in your order comments.
Please note that our ELISA and CLIA kits are optimised for detection of native samples, rather than recombinant proteins. We are unable to guarantee detection of recombinant proteins, as they may have different sequences or tertiary structures to the native protein.

For Reference Only
